

Mostafa Mohamed Elsayed Abdelshafy

Junior Penetration Tester — Malware Analysis Enthusiast — Computer Science Student
+20 1099492414 — abeostafa@gmail.com — Cairo, Egypt — linkedin.com/in/mostafaabdalshafy

CAREER OBJECTIVE

Junior Penetration Tester and Computer Science student with hands-on practice in web application security, vulnerability assessment, and security labs. Experienced with Burp Suite and Nmap through practical testing, CTFs, and structured labs, with a focus on identifying vulnerabilities, validating findings, and documenting security issues.

EDUCATION

Sinai University — Faculty of Information Technology & Computer Science
Bachelor's Degree in Information Technology and Computer Science

2023 – Expected 2027
Egypt

COURSES & CERTIFICATIONS

Certified Cybersecurity Educator Professional (CCEP) — Red Team Leaders

Jr Penetration Tester Learning Path — TryHackMe

Advanced & Basic Malware Analysis and Reverse Engineering — Mahara-Tech

Red Hat System Administration I (RH124) — Mahara-Tech

eWPT Training — Completed web penetration testing training and practical labs

eWPTX Preparation — Currently studying advanced web penetration testing techniques and exploit development

Network Traffic Analysis — Completed Wireshark-based traffic analysis training

TECHNICAL SKILLS

Application Security: Web Application Security, OWASP Top 10, Vulnerability Assessment, Manual Security Testing, Burp Suite (Proficient)

Penetration Testing: Web Application Penetration Testing, Network Security, Active Directory Fundamentals, Metasploit (Proficient)

Security Tools: Burp Suite, Metasploit, Nmap, Wireshark, FFUF, Gobuster, Amass, Subfinder, theHarvester, Recon-ng, Nessus, Nikto, Hydra

Malware Analysis & Reverse Engineering: Static Analysis, Dynamic Analysis, Reverse Engineering Fundamentals, Practical Malware Analysis (*Currently Studying*)

Programming & Web Technologies: C++, C#, PHP (*Currently Learning*), JavaScript, Node.js (*Currently Learning*), ASP.NET Core (*Currently Learning*)

Operating Systems: Linux (Proficient), Windows

Academic Foundations: Operating Systems, Database Systems, Object-Oriented Programming, Computer Architecture, Parallel Processing, AI & Machine Learning

PROJECTS

Basic Network Sniffer Security Project

Network Security Project

Python

Developed a Python-based packet sniffer to capture and analyze live network traffic.

Parsed Ethernet, IP, TCP, and UDP headers to inspect packet-level data and analyze network protocols.

Applied packet-level analysis to strengthen practical understanding of network traffic and communication protocols.

Law Office Management System

Full-Stack Desktop Application — University Project

C#, WinForms, ADO.NET, Microsoft SQL Server

Developed a WinForms application backed by a normalized Microsoft SQL Server database.
Implemented full CRUD operations using ADO.NET for managing clients, cases, sessions, and related records.
Built invoice generation, scheduling, advanced search, and filtering features to support daily office workflows.

Weather Prediction Pipeline

Machine Learning & Data Engineering – University Project

Python, XGBoost, Apache Airflow, PostgreSQL

Built an end-to-end data pipeline covering data cleaning, IQR-based outlier removal, feature engineering, and time-series forecasting.

Trained an XGBoost regression model achieving an MAE of 1.83°C and approximately 67% accuracy within $\pm 2^\circ\text{C}$.

Orchestrated data workflows with Apache Airflow and used PostgreSQL for data storage.

Smart Garage System

Embedded Systems – University Project – A+ Grade

ATmega32, Embedded C, HC-SR04, MQ-5, Servo, LCD

Led a 3-member team to design and implement an automated garage gate using an ATmega32 microcontroller.

Integrated HC-SR04 ultrasonic and MQ-5 gas sensors with servo motors and an LCD 1602A.

Implemented embedded C programming, hardware interfacing, debugging, and system testing.

TechCourses Website

Web Technologies – University Project

HTML, CSS, JavaScript

Built a responsive multi-page website for organizing and presenting external learning resources.

Implemented interactive forms with client-side validation and dynamic content loading.

Unity 2D Platformer Game

Computer Graphics – University Project

Unity, C#

Developed a 2-level 2D platformer using Unity and C# with physics-based player controls and animations.

Implemented collision handling, a Singleton-based GameManager, and multi-scene progression.

EXTRACURRICULAR ACTIVITIES

Mentor – ICPC Competitive Programming Community

2023 – Present

Sinai University

Mentor students in competitive programming, algorithms, and problem-solving as part of the university ICPC community.

CTF & Security Practice

TryHackMe & Hack The Box

Solve Capture The Flag challenges focused on web exploitation, privilege escalation, and digital forensics.

Practice OWASP Top 10 web vulnerabilities using Burp Suite and manual testing techniques in controlled labs.

Perform network reconnaissance and vulnerability assessment using Nmap and Metasploit in controlled environments.

Conduct static and dynamic malware analysis in isolated lab environments and document findings and indicators of compromise.

ADDITIONAL INFORMATION

Languages: Arabic (Native), English (Intermediate – strong technical reading and writing)

Available for internships, junior roles, part-time work, and student research projects.
